9. About Dr Amrita Roy

Educational Qualification—M.Sc, Ph. D,

Present Designation- Assistant Professor, Department of Biotechnology, Indian Academy Degree College-Autonomous, Bangalore.

Topic- Molecular Dynamics of covid-19

Abstract of the topic:

The vast geographical expansion of novel coronavirus and an increasing number of COVID-19 affected cases have overwhelmed health and public health services. It infects the body by entering healthy cells. There, the invader makes copies of itself and multiplies throughout the body. The new coronavirus latches its spiky surface proteins to receptors on healthy cells, especially those in your lungs. Specifically, the viral proteins bust into cells through ACE2 receptors. Once inside, the coronavirus hijacks healthy cells and takes command. Eventually, it kills some of the healthy cells. Cytokines are small glycoproteins produced by various types of cells throughout the body. cytokine storms have been referenced in various infectious diseases, which is why this term is most commonly used to describe an uncontrollable inflammatory response by the immune system. One of the most notable clinical conditions that are associated with cytokine storms includes acute respiratory distress syndrome (ARDS), which has accounted for a significant number of deaths from SARS-CoV-2.

10. [About Dr Soumen Bera](#)

Educational Qualification—M.Sc, Ph. D

Present Designation- Assistant Professor, School of Life Sciences, B.S.Abdur Rahman Crescent Institute of Science and Technology, Vandalur, Chennai–600048, India

Topic - Understanding covid-19 diagnosis, qPCR

Abstract of the topic:

The COVID-19 RT-PCR TEST is a real-time reverse polymerase chain reaction test for the qualitative detection of nucleic acid from SARS-CoV-2 in upper and lower respiratory specimen. RT-qPCR can detect the genetic information (RNA) of the novel coronavirus- even if the virus is present in extremely small amounts.
